

VINK CALFPULLER

Vink

VINK CALFPULLER

- The unique rump-frame encircles the rear of the cow making it **IMPOSSIBLE** for the frame **TO SLIP AWAY** from the cow.
- All parts, ratchet pole with lever mechanism and rumpframe, are constructed in **STAINLESS STEEL** to ensure long and troublefree service.
- The construction of the support permits the herdsman to direct the pulling tension **DOWNWARDS** FOR A **NORMAL** birth and **UPWARDS** FOR A **POSTERIOR PRESENTATION**.

- During a normal presentation, one should draw downwards.

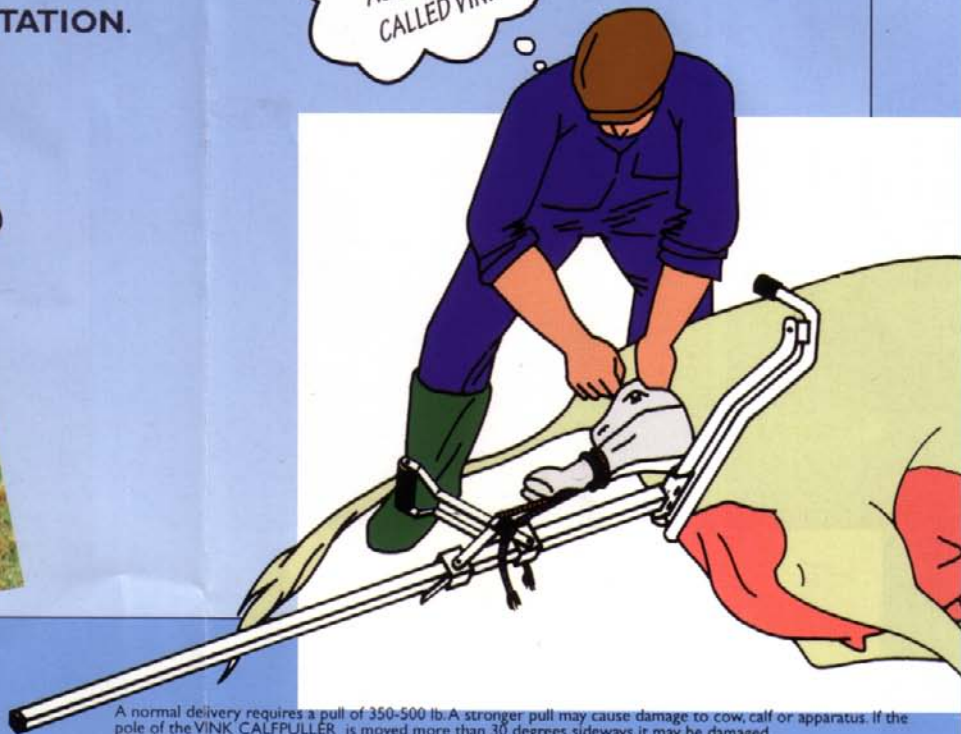

- In the case of a posterior presentation, the draw should be upwards.

MY NEW ASSISTANT IS CALLED VINK

I'LL CALL HIM VINKY

A normal delivery requires a pull of 350-500 lb. A stronger pull may cause damage to cow, calf or apparatus. If the pole of the VINK CALFPULLER is moved more than 30 degrees sideways it may be damaged. The manufacturer does not accept responsibility for damage caused by the above mentioned or other improper use of the VINK CALFPULLER.

VINK CALFPULLER

- **The only Single-handed Calfpuller**

Stays where you want it, when you need it because it cannot slip out of position.

- **The only calving aid you will ever need.**

Wholly constructed in stainless steel, very robust and practically indestructible.

- There is a special **VINK CALF PULLER FOR BEEF-CATTLE.**

The new size is more robust with a larger frame and pole, thus allowing the herdsman to give the necessary extra pull when needed.
